

Change in every strap.

Because the future of strapping is
made from strapping.

The logo for 'better.collect', consisting of the text 'better.collect' in a white sans-serif font, enclosed within a white rounded rectangular border. A small white arrow points to the right from the top of the border.

Every journey starts with one strap.

Anyone who really wants to change something in this world must first change their way of thinking. And that's exactly what we at Teufelberger have done. But let's start from the beginning...

As the world's largest system-independent manufacturer of high-performance strapping, responsibility is not just a buzzword for us: It's what drives us. There is the responsibility for people and goods: after all,

the safety of our employees, customers, and users is just as much a priority for us as the security of the goods being transported. But there is another huge responsibility: the responsibility for tomorrow. We see it as our duty to contribute to a livable future with as little CO₂ consumption as possible.

To ensure this, we continue to think ahead—and from now on, also „in circles“.

Open for a closed loop that can change everything?

Reusing strapping bands is not possible due to the properties of the material. The strap loses tension with use and becomes unsafe. However, this has not stopped us from thinking further – and launching our circular service **better.collect!**

Thanks to this unique cycle, the very best comes from strapping: strapping.

With a shredder or press, the used band is simply word compressed, collected, picked up, and processed into new band. This saves space and is proven to reduce CO₂ as well as plastic waste. The benefits are huge, and the effort for our customers and users is minimal, since we take care of the logistics behind it. In this way, **better.collect** closes the loop between application, collection, processing, and recycling—and our bands end up as valuable raw material that can be reused!

Let's change the world together — strap by strap. With a unique cycle that brings benefits for everyone!

“Several thousand tons of strapping are landing in incineration annually. We can change this together!”

Jürgen Scheiblehner
Chief Executive Officer Strapping Solutions

15.000

tons to be collected until 2030

Mio. kg CO₂ savings for customer

We truly move strapping forward.

By thinking in Circles.

Packaging & Shipping

Tested in our own strapping center, our high-performance strapping bands secure the highest quality packaging solutions. For every application, we offer the suitable PP or PET strap. But we think beyond the manufacturing and selling of our products! They do not end as waste but are a valuable raw material.

Collecting & Compressing

Strapping can take up valuable storage space as individual bands. As small pieces or pressed bales, they are extremely space-saving and economical. With a strap shredder or a band press, compressing is easy. This way, the bands are sorted by materials (PP or PET) and collected as bales or in Big-Bags.

Pick up

We take care of the transportation of the shredded bands, whether directly or with the help of our expanding partner network. We always pay attention to full transport loads to keep the collection and transportation as ecologically friendly as possible!

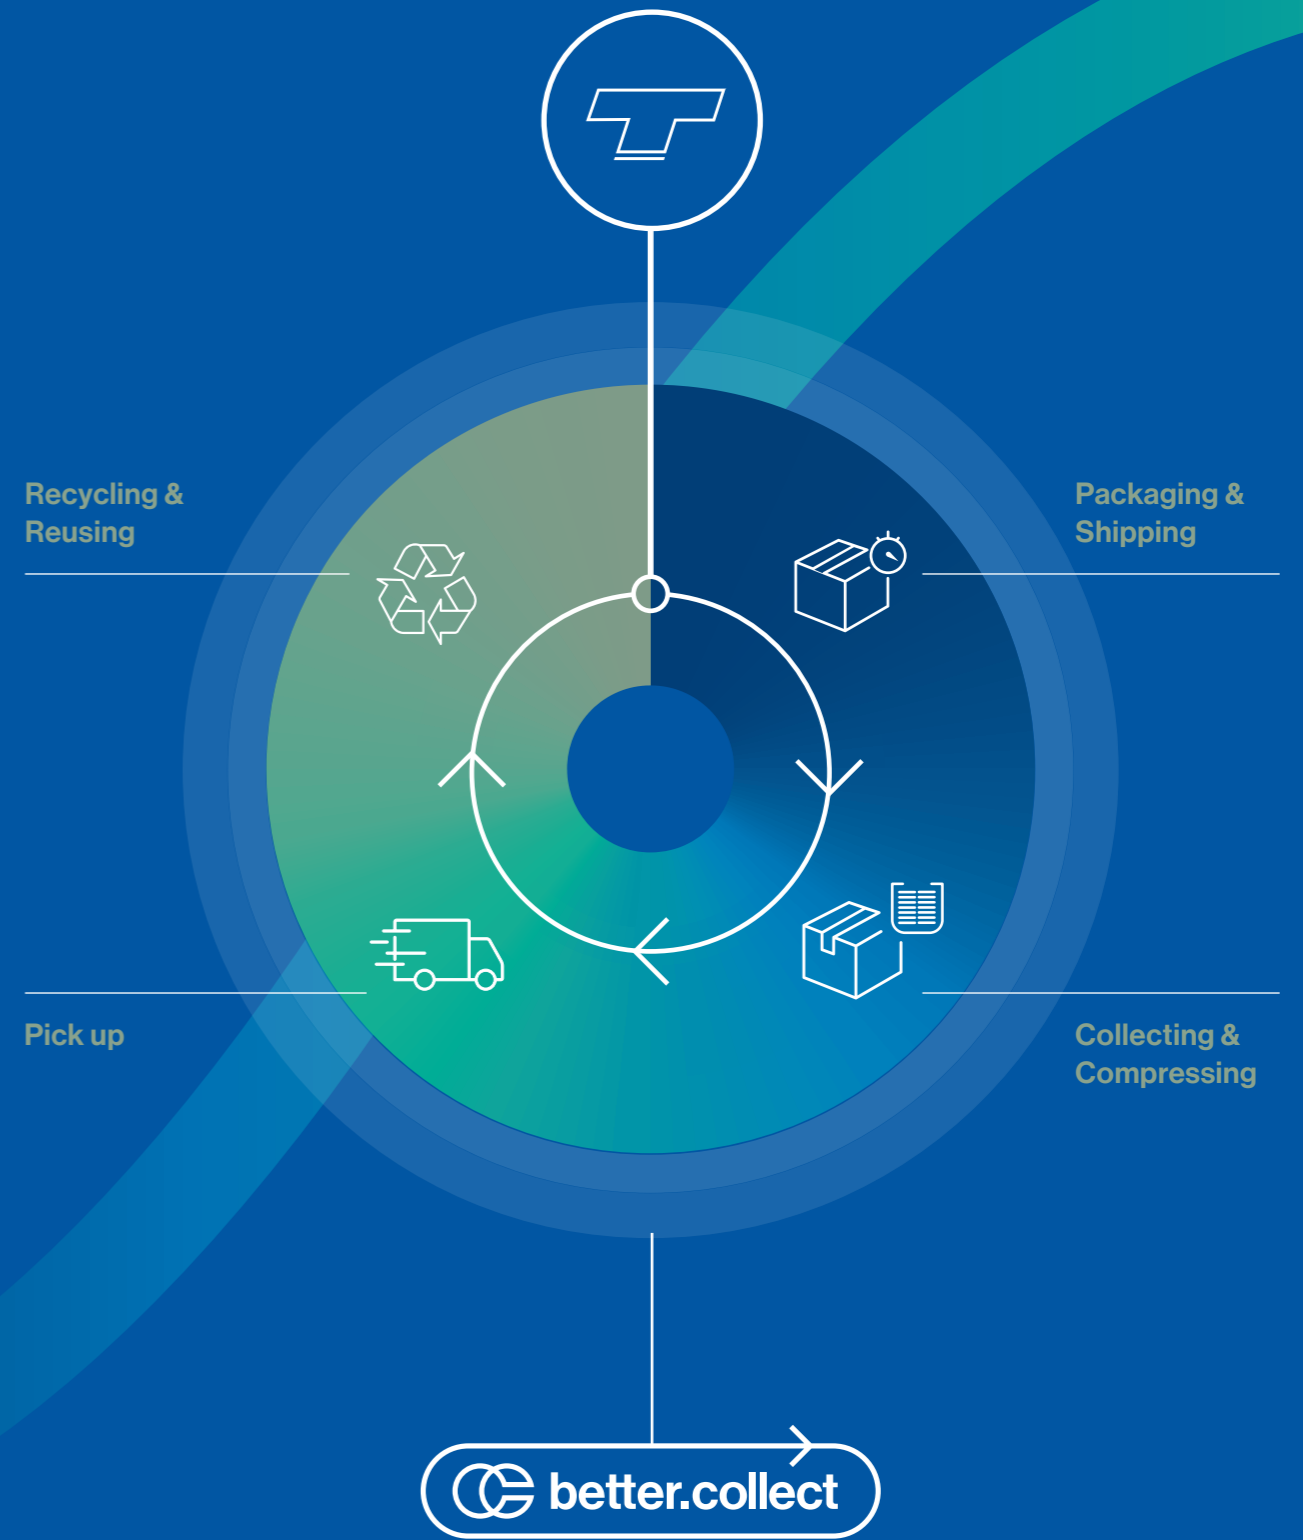

Recycling & Reusing

In the next step, the material is processed and washed. Our straps are meant to be recycled: after all, due to their material composition, they are considered monomaterial. PET and PP bands are 100% recyclable! This is another good example, showing that recycling starts with product design.

Beginning and Ending of the Cycle

As a valuable raw material, the strapping comes back to us. From it we manufacture the very best: brand new Teufelberger strapping band! When all the gears interlock, the cycle closes here – and opens up new advantages for the environment and all of us. Each cycle is a step towards a cleaner future. Over and over again.

Beginning and Ending of the Cycle
We cover the costs of transportation and reprocessing—together, we create a future with less waste and more sustainability!

An endless Circle with endless benefits for everyone.

A circle is endless – the benefits of our better.collect circle are too.

With **better.collect**, a win-win situation arises for everyone: For the collectors, who can be sure that the material will be processed in the best possible way and that they can achieve their environmental goals. For us as manufacturers, leading our strapping to new functions. And of course, for the environment – the most important beneficiary of all!

Significant savings on storage costs and resources

The strapping band is simply compressed. Storing as bales or in Big-Bags is economical and saves space. We can also provide reusable Big-Bags upon request.

Proven reduction in CO₂ consumption

We support our customers and partners in achieving their sustainability goals. For this, we issue an official certificate that confirms the CO₂ savings!

An invaluable contribution to saving plastic

Together, we make our contribution to a future with less waste and plastic consumption. It's all about perspective: where others see waste, we see a raw material for further use!

A USP that suits everyone

With **better.collect**, we create a unique cycle together, that adds value for everyone!
